LiteCon Eco Slabs are Chelmstone's range of innovative and lightweight composite concrete slabs. Ideal for air-conditioning bases, pool pumps and filters, irrigation pumps, gas bottles, hot water systems, solar panels & batteries, generator and wheelie bin bases.

LiteCon Eco Slabs are non-aerated concrete slabs that provide the strength of standard concrete at approximately half the weight. Using synthetic reinforcing bars, LiteCon Eco Slabs have excellent impact resistance and flexural strength.

LiteCon Eco Slabs are supplied in both a flat and a ripple design. The ripple design is utilised for hot water systems, reducing the likelihood of condensation and the possible pooling of water, preventing corrosion on the base of the hot water system. Rather than installing an expensive wet poured slab, LiteCon is a cost effective, simple and aesthetically pleasing alternative for installers of hot water and air-conditioning systems.

With over 25 years manufacturing experience, Chelmstone's LiteCon Eco Slabs are made with the highest standards of quality control.

LiteCon Eco Slabs are designed to meet Plumbing Code AS/NZ3500.4. Australian owned and manufactured, LiteCon Eco Slabs are made from 75% recycled waste material, making them environmentally sustainable.
